### Solvers

AMPL prices above are for the AMPL modeling language and system only. To make use of AMPL it is necessary to also obtain at least one solver having an AMPL interface. Solvers may be obtained from us or from another source.

As listed above, we currently offer for direct purchase the mixed-integer linear/quadratic solvers CPLEX, Gurobi, and Xpress; the linear/nonlinear solver MINOS; and the general nonlinear solvers CONOPT, KNITRO, and SNOPT. Our prices for these solvers apply to the versions that incorporate an AMPL interface; a previously or concurrently purchased copy of the AMPL software is needed to use these versions. Programming libraries and other forms of these solvers are not included.

AMPL may also be purchased by itself for connection to solvers sold by other vendors and to noncommercial or experimental solvers. Contact us or consult [www.ampl.com/solvers.html](http://www.ampl.com/solvers.html) for pointers to detailed information about all solver options.

## **License types**

Each *single-user* license allows the product to be run in any number of simultaneous processes, on one designated computer by one designated user and userid. Sharing a userid to permit more than one user to access a single-user license is expressly disallowed by the license agreement.

Each *floating* license allows one single-user license at a time (AMPL, CONOPT, MINOS, SNOPT) or one process at a time (CPLEX, Gurobi, KNITRO, Xpress) to be activated on any computer within a specified list of network (IP) address ranges.

Each *server* license allows the product to be run by any number of users in any number of simultaneous processes, on one designated computer. A “socket” denotes one processor chip having any number of cores; the single-socket, dual-socket, and quad-socket prices apply to computers having respectively one, two, and four processor chips.

Prices are available upon request for other numbers of processor sockets, for floating server licenses, and for other licensing arrangements. Please contact us at [licensing@ampl.com](mailto:licensing@ampl.com) for quotes.

## **Maintenance**

AMPL maintenance and support service includes access to AMPL and solver software updates, regeneration of license files necessitated by hardware changes, and technical assistance with installation and execution. The quoted prices include one year of maintenance and support. Subsequent maintenance and support service is charged at an annual rate equal to a percentage, currently 20%, of the license price in effect at the time of renewal.

Maintenance and support will be billed annually unless cancelled in writing by the customer prior to the renewal date. Contact us at [sales@ampl.com](mailto:sales@ampl.com) for information on upgrades to copies not currently under maintenance.

## **Volume Discounts**

Discounts may be available on purchases of multiple AMPL or solver licenses. Previous purchases can be counted toward volume discounts provided their maintenance is current. Please contact us at [sales@ampl.com](mailto:sales@ampl.com) for details.
